2025-2029

DIGITAL LITERACY

Course Code: CSE0001

Name : Aishwarya Prasad

Reg. No. : 25BCE11047

Branch : Computer Science (Core)

Academic Year : 2025-2026

School of Advanced Sciences and Languages (SASL)

Introduction

In today's digital age, the ability to effectively use technology has become an essential skill. Digital literacy involves not only understanding how to operate digital tools but also using them responsibly, safely, and efficiently. With the increasing dependence on the internet for education, communication, and daily activities, it is important for students to develop strong digital skills.

This project focuses on enhancing digital literacy through various practical tasks such as creating an infographic, building a professional online portfolio, exploring coding platforms, understanding email etiquette, and analyzing cybercrime scenarios. These activities help in developing awareness about online safety, improving communication skills, and building a professional digital presence. Overall, this project aims to prepare students to use digital technologies effectively and responsibly in both academic and professional environments.

Task 1 Report : Digital Literacy Awareness Infographic

In this task, I created an infographic on the topic of Digital Literacy Awareness using Canva. The aim of the infographic was to present important concepts related to digital literacy in a clear, concise, and visually appealing manner. The infographic covered key areas such as the meaning of digital literacy, useful digital tools for students, safe internet practices, professional online presence, and email etiquette.

I focused on using simple language, relevant icons, and a structured layout to ensure that the information was easy to understand. The use of colors and visual elements helped in making the content more engaging and accessible. One of the challenges I faced was balancing the amount of information with the design, as it was important to keep the content brief while still covering all essential points.

Overall, this task helped me improve my ability to summarize information and present it effectively through visual design.

Task 2 Report : Student Digital Portfolio

In this task, I created and updated my profiles on various online platforms to build a professional digital portfolio. I used GitHub, LinkedIn, and Kaggle to establish my online presence. On GitHub, I created a profile README to introduce myself, highlight my academic background, and mention my interests in software development. This platform helps in showcasing projects and tracking coding progress.

On LinkedIn, I completed my profile by adding my educational details, a professional headline, and a brief summary about my interests and goals. LinkedIn serves as a platform for networking and exploring career opportunities. Additionally, I created a profile on Kaggle, which is useful for learning data science concepts and working with datasets.

This task helped me understand the importance of maintaining a professional online presence. It also encouraged me to start building a strong digital identity that will support my academic growth and future career opportunities.

Task 3 Report : Coding & Collaboration

In this task, I used HackerRank and Google Forms to explore coding practice and collaboration tools. On HackerRank, I completed a beginner-level coding challenge, which helped me understand problem-solving techniques and improve my logical thinking. It also gave me exposure to writing structured code and understanding basic programming concepts.

For collaboration, I created a Google Form based on Digital Literacy Awareness, which included both multiple-choice and short-answer questions. This helped me learn how to design quizzes, collect responses, and analyze data effectively using Google Sheets.

These tools will be highly useful for my academic growth, as platforms like HackerRank will help me strengthen my coding skills, while Google Forms can be used for surveys, feedback collection, and project work. Overall, this task improved my technical abilities as well as my understanding of digital collaboration tools.

Task 4: Professional Email & Etiquette Guide

In this task, I learned and applied the principles of professional digital communication by drafting two formal emails and creating a social media etiquette checklist. The first email was written to a professor requesting an extension for an assignment, while the second email was addressed to an internship coordinator expressing interest in a summer internship opportunity.

While writing these emails, I focused on maintaining a clear subject line, proper salutation, polite tone, and structured content. Additionally, I created a checklist of do's and don'ts for responsible social media usage, which highlights the importance of maintaining professionalism online.

This task helped me understand how effective communication plays a crucial role in academic and professional environments, and how proper etiquette can create a positive impression.

Task 5: Cybercrime Awareness Case Study & Prevention Guide

In this task, I explored the topic of cybercrime by studying a case of UPI payment fraud. I analyzed how such frauds occur step-by-step, identified the common targets, and understood the consequences, including financial loss and security risks. This helped me realize how easily individuals can fall victim to online scams due to a lack of awareness.

I also created a prevention checklist with practical safety measures, especially focusing on secure online transactions and protecting personal information. The checklist included guidelines specific to UPI safety and also mentioned official reporting channels such as the National Cyber Crime Portal and helpline number 1930.

This task increased my awareness of digital threats and encouraged me to adopt safer online practices in my daily activities.

Conclusion :

This project helped me develop a comprehensive understanding of digital literacy and its importance in today's world. Through various tasks, I gained practical knowledge about using digital tools, maintaining a professional online presence, practicing coding, and communicating effectively through emails. I also became more aware of online safety and cybercrime prevention.

Overall, this project enhanced my technical, communication, and analytical skills, and encouraged me to use digital technologies responsibly. The knowledge and skills gained from this project will be valuable for my academic journey as well as my future professional career.
